**Brief**

Canopy Tree Experts have been engaged by Oakstand to provide an Arboricultural Assessment of the trees on Block 7, Section 4, Banks Street Yarralumla ACT. The scope of works is to include:

- 1. A site visit to assess trees of over 6m<sup>1</sup> in height and:
- 2. Prepare a tree schedule in table format to be included in an Arboricultural Report
- 3. The Tree assessment will:
  - I. Assess either individual trees or groups of trees of same species within planted together. And:
  - II. Groups will record the average sizes and conditions and will not be listed individually, unless:
  - III. A tree, or a number of trees, within any of the groups is significantly different to the average tree within that group or requires rectification work. These trees are to be listed individually

Veris surveyors were engaged by Oakstand to survey the site. The tree numbers, tree heights and trunk circumferences in this report are as per the current Veris survey (The drawing project number is 07302.20 Revision number 07302\_20\_DT\_001@ A0.)

**Site History**

This site was formally the Australian Forestry School. It is currently leased by the Commonwealth agency CSIRO and is considered a Commonwealth Heritage place. The site is listed for Commonwealth Heritage values under criteria A H:

The vast range of species represent a significant genetic resource, provide scientific research opportunity both past and present and provide an overall historic landscape value. For all other heritage information please refer to the Heritage Assessment done by ERM.

As it is a commonwealth site it is not protected under 2005 ACT tree Protection Act legislation, however for the purpose of this report will use the Act as a guide.

<sup>1</sup>6m height chosen as the lower limit usually used by Heritage ACT

**Summary of Field Findings**

Canopy Tree Experts assessed the trees between 21st April 2020 to 9th of May 2020. There are 1550 trees over 6m in height on the site. It was a visual assessment (VTA)<sup>2</sup>at ground level, no invasive diagnostic methods were used, photos were taken. The site was assessed by 3 AQF Level 5 Arborists over 3 weeks.

Veris surveyed all trees over 6m, they assigned the tree numbers, measured height, canopy and trunk circumference, Canopy Tree Experts combined this data into our tree schedule when assessing the trees. If any Veris measurements appeared incorrect we re-measured and updated the schedule to reflect the correct measurements.

The trees were assessed as either individual trees or in groups where appropriate. Each tree or group of trees were identified, assigned a tree number or group, height, trunk circumference, canopy width and were assessed for health, structure, regulatory status and overall tree quality. Trees under 12m or weed species were identified but not assessed as described above.

All assessment results are tabulated within the Tree Schedule and the Tree location plan attached

There were 24 Tree Groups that were divided up into species or groups of similar species. Each group was assigned an overall Tree Quality assessment of either Exceptional, High, Medium, Poor or Weed Species. If Individual trees within a group were significantly different then comments were detailed within the tree schedule.

<sup>2</sup>VTA Method (Visual Tree Assessment) as presented in the body language of trees1994 Mattheck, Claus &Breloer, Helge, The Stationery office, Norwich, UK pp.118-120.

	<b>Poor Quality Group</b> – A poor quality tree or group is of poor form, structure or health or is likely to represent a significant safety hazard.
	<b>Weed Species Group</b> – A group that is mostly a mix of weeds and unregulated trees that are generally poor quality. Refer to Tree Protection Status notes above for details. Weeds species were not assessed for structure, health or quality
	<b>Medium Quality Group</b> - A medium quality tree or group of trees represent reasonable form, structure and health and is not likely to represent a significant safety hazard.
	<b>High Quality Group</b> – A high quality tree or group of trees is one that generally has good form and condition and without structural defect. (or defects that may be rectified easily)and does not represent a significant hazard to public and private safety.
	<b>Exceptional Quality Group* or Individual Tree-</b> An exceptional tree is prominent within the landscape and contributes significantly to the surrounds.They are generally free of significant defects. They can also be assessed as exceptional for its botanic/scientific, cultural, and natural heritage values.
	<b>Registered Trees</b> Are generally exceptional trees that are on the ACT tree register because they are either of high heritage, landscape, or scenic value.

Some of the 1550 trees were not located some had been removed or died.

The tree schedule and tree location plan are to be read in conjunction with each other.

**\*D10**

It is an example of how a 10% loss within the TPZ area can be calculated and is acceptable incursion within AS 4970.

It is the distance from the centre of the trunk to a straight-line excavation past the trunk that would excise 10% of the area of the TPZ. This is subject to site analysis of tree location and where the likely absorptive tree roots are located

Group 1- **MEDIUM QUALITY** Cedrus Atlantica

Group 1 – **MEDIUM QUALITY** Cedrus atlantica

Group 4 –**HIGH QULAITY** Pinus Canariensis and Pinus Brutia

Group 4 – **HIGH QULAITY** Pinus douglasiana

Group 4 **HIGH QULAITY** Pinus Halepenses

Group 4- **HIGH QULAITY** Pinus michoacanna cornuta

Group 12 – **WEED SPECIES** This group of mostly weed species, Pinus radiata, Acacia baileyana, crataegus monogyny, Cotoneaster, and some Brachychiton populneus which are not weeds. Collectively a poor quality group.

Group 13- Mixed **POOR** quality group of Eucalyptus saligna or Eucalyptus grandis, Corymbia maculata densely planted in plantation rows.

Group 13 – **MEDIUM QUALITY** *Corymbia maculata* mix

Group 14 – **MEDIUM QUALITY** Group *Quercus robur* with weedy understory

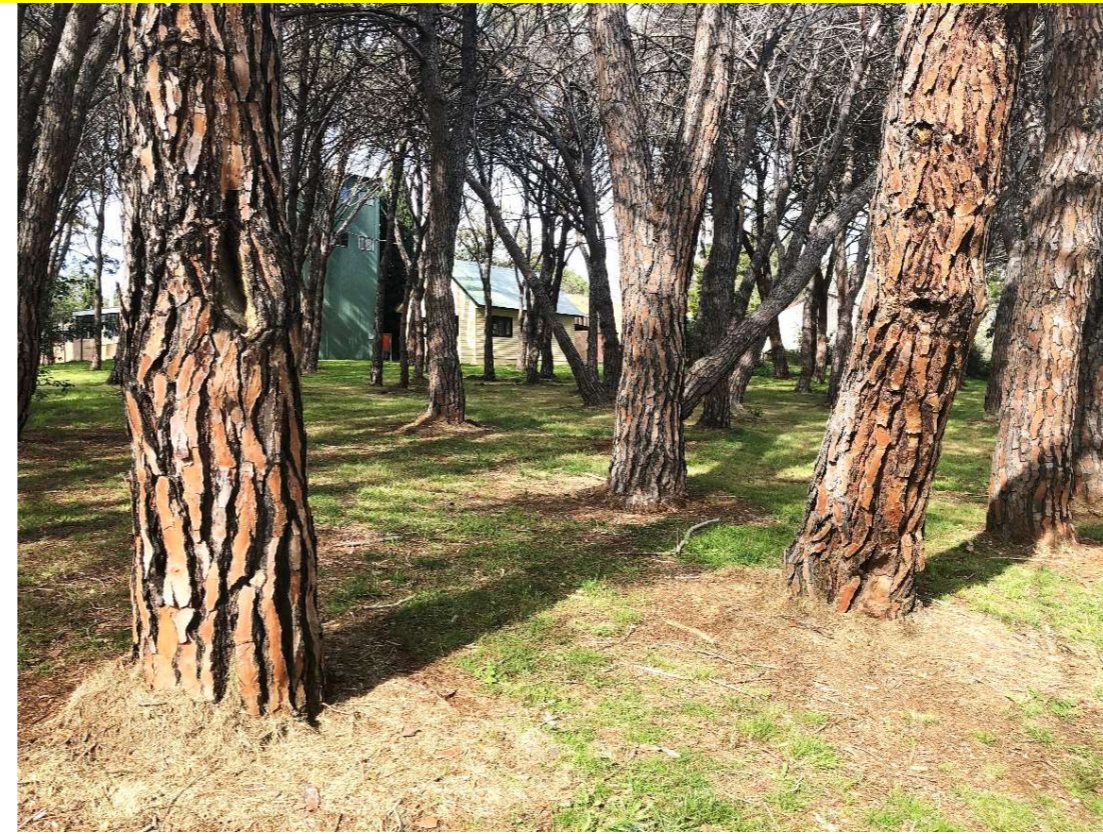

Group 17 – **POOR QUALITY** Group *Pinus* species

Group 17- **POOR QUALITY** group mix of *Eucalyptus* species (Excluding trees 596 597)

Group 18 – **High Quality** Group *Pinus pinea*

Group 18 – **High Quality** Group *Pinus pinea*

Group 20 – **High Quality** Pinus ponderosa

Group 20 – **High Quality** Pinus ponderosa

Group 20 – **High Quality** Pinus ponderosa

Group 22 **High Quality** Pinus Pinea

# Appendix 1

## Explanations of Terms Used in the Tree Assessments

This site is a commonwealth site and therefore is not required to conform to of ACT Tree protection Act ‘*Notifiable Instrument NI2007-422*’. We have however used the Act as an instrument to guide and inform our tree assessment. The assessment has also been developed to conform to the requirements The AS4970-2009 ‘*Protection of trees on development sites*’

## Tree Number

A unique identification number allocated to each tree as provided by Veris Surveyors. Their numberings system was often not sequential. This site was formerly a forestry site where many trees were planted in very close proximity, and as such it is sometimes impossible to ascertain the surveyors given tree number from the A0 sheet. To clearly identify individual tree numbers it was necessary to open the architectural CAD program to zoom in.

## Species

The binomial species name is given where identifiable. Some *pinus* species were not identified.

## Height

Tree height was determined by Veris surveyors, all trees above 6m were surveyed. Where the height appeared to be incorrect, we in measured using a clinometer from a measured offset and the height was corrected on our tree schedule.

## Directional Canopy Radii’

Canopy radii were measured Veris Surveyors. We assume it is the, the broadest canopy diameter is also measured to determine if a tree is regulated. If Canopy radii appeared incorrect we measured it again and updated our tree schedule.

## Health

Is an indication of the tree’s health and vigour. It has been judged against the following range:

**Very Good (VG), Good (G), Fair (F), Poor (P), or Very Poor (VP)**

General comments on the tree’s health and vigour, and specific comments on evidence of **insect** infestation or **disease** presence in the tree are included in the **Comments Column** if significant.

## Structure

The structural integrity of the tree has been judged against the following range:

**Very Good (VG), Good (G), Fair (F), Poor (P), or Very Poor (VP)**

General comments on the tree’s structure and specific comments on evidence of **Root Zone Disturbance** and **Structural Damage** to the tree are included in the **Comments Column** if significant.

## Tree Protection Status

The legal status of each of the trees is given as one of the following:

**Not Regulated** -no protection required, can be retained or removed.

**Park Tree**-protected by legislation other than the Tree Protection Act 2005. To be protected by the LMPP (Landscape Management and Protection Plan), or otherwise negotiated with Urban treescapes section of TCCS.

**Weed species (pest plant)** - is a weed: no protection required, may be removed without permit (or retained: -depending on level of classification).

**Regulated tree**-a tree that, due to its size, is classified as a ‘Regulated Tree’ under ‘The Tree Protection Act 2005’ and therefore a permit would be required to:Remove the tree;Prune the tree, except where the pruning is done by a qualified arborist and is done to the ‘Australian Standard for Pruning of Amenity Trees’ AS 4373;

Carry out ground works within 2m of the ‘drip line’ of the tree.

A Tree Management Plan that is formulated according to the ‘Notifiable Instrument NI2007-422:Tree Protection (Guidelines for Tree Management Plans) Determination 2007’ is designed to act as an application for the Tree Damaging Activities associated with this development.

**Registered tree**-a tree that has been nominated to the ‘Significant Tree’ Register. It may have more rigorous protection

measures than a regulated tree (refer to its listing on the Tree Register.

**Regulated remnant** A regulated tree that is also a remnant eucalypt. For a Remnant, the Approval Criteria 1 (1) (d) (Inappropriate location) & (e) (substantially affecting solar access) in Disallowable Instrument Tree Protection (Approval Criteria) Determination (No.2) DI2006-60 do not apply. Remnant eucalypt is not defined in the DI2006-60. In this assessment, it is taken as a eucalypt that was likely to be present at the time of initial subdivision of the land on which it stands.

**Regulated schedule 2** – a regulated tree that is of a species listed in Schedule 2 of Disallowable Instrument *Tree Protection (Approval Criteria) Determination (No.2) DI2006-60*. Schedule 2 lists problematic tree species for which the conservator may give approval for removal, if on a block of less than 1200m²

**Street tree**-protected by legislation other than the Tree Protection Act 2005. To be protected by the Landscape Management and Protection Plan (LMPP).

## Tree Group Quality Classification

	<b>Poor Quality Group</b> – A poor quality tree is of poor form, structure or health or is likely to represent a significant safety hazard
	<b>Weed species Group</b> – a mix of weeds and unregulated trees that are generally poor quality. Refer to Tree Protection Status notes above for details.
	<b>Medium Quality Group</b> - A medium quality tree is one of reasonable form, structure and health and is not likely to represent a significant safety hazard.
	<b>High Quality Group</b> – A high quality tree is one that is of good form and condition and without structural defect. It should not represent a significant hazard.
	<b>Exceptional Quality Group or Individual Tree</b> - Is prominent within the landscape, contributes significantly to the surround and is. a tree or group of trees that are generally free of defects that cannot otherwise be addressed by remedial treatment. It is also considered exceptional for botanic, scientific, cultural and natural heritage values. If the trees are exceptional for the above Botanic, scientific.. reasons then it may <u>not</u> be ruled out because of health, structure or safety concerns.
	<b>Registered tree</b> -a tree that has been nominated to the ‘Significant Tree’ Register. It may have more rigorous protection measures than a regulated tree (refer to its listing on the Tree Register

These classifications are based on the guidelines in the 'Draft Guidelines for the Preparation of Tree Management Reports for Development on un leased Territory Land 2004 Draft'

Maturity\*

Juvenile recently planted

Early Mature -8 to 20 years approximate\*

Mature- 20 -40 years

Veteran – 40 onwards -Reached its maturation in height and is only slightly increasing in volume.

\* Maturity assessments are approximate only and are to be used as a guide only. There is variation between species

Arboricultural Recommendations

Retain –a tree above 6m that has no arboricultural reasons for removal

Retain as a group only – a group of trees above 6m that has no arboricultural reasons for removal. A group that is to remain intact. The reasons for this are: If one tree or some of the trees within the group were removed it is likely to impact the structural integrity of the remaining trees or: It is to likely to affect the collective quality of the group

Retain/remove – a tree or group of trees that are either poor quality, have poor health or poor structure but are not an imminent risk of failure or risk to safety.

Remove refer to comments – Tree is dead and should be removed. Tree is dangerous and should be removed

Major arboricultural work required refer to comments – Arboricultural work is necessary to retain a tree or a group of trees.

Comments

Any comments that are relevant are recorded in this column especially those related to health and structure and value.

Circumference<sup>4970</sup>

Trunk Circumference for the calculation of the Tree Protection Zone as per Australian Standard AS4970-2009 (TPZ<sup>4970</sup>)is the trunk circumference

at 1.4m above ground level. It is expressed in metres and lists the individual trunk circumferences, if there are more than 1 trunk at that height. These are used to calculate the DBH and subsequently the Radius TPZ<sup>4970</sup>. Where there is more than one trunk at 1.4 m AGL then the DBH is calculated by the formula presented in AS4970-2009. (Branches, c.f. trunks, are not included).

Radius TPZ<sup>4970</sup>

The radius of the Root Protection Zone component of the Tree Protection Zone as calculated from the trunk diameter at 1.4m AGL as recommended by the AS4970-2009. Note the final TPZ<sup>4970</sup> may need to be extended to include crown protection.

\*D10 TPZ

It is an example of how a 10% loss within the TPZarea can be calculated and is acceptable incursion within AS 4970.

It is the distance from the centre of the trunk to a straight-line excavation past the trunk that would excise 10% of the area of the TPZ.This is subject to site analysis of tree location and where the likely absorptive tree roots are located

# Appendix 2–Method and Limits

## Method

The inspection of the trees was limited to a visual examination from ground level without the use of boring or testing devices. The VTA method<sup>3</sup> was used. Defects were identified and evaluated along with the tree's response to those defects, the tree's health and tree's vigour to produce an understanding of the tree's soundness. Where indications suggest that 'sounding' would be worthwhile the trunk was 'sounded' with a mallet.

## Limits

### Covers only those trees listed

The information in this report covers only those trees listed and reflects the condition of those trees at the time of the inspection.

## Natural variability of trees and their environment

Canopy Tree Experts' arborists conscientiously apply their knowledge in assessing trees and recommending treatments with the aim of achieving the best outcomes for their clients' trees. However, given the natural variability of trees, the arborist may not be able to detect every possible way a tree, or part of a tree, may fail above or below ground. The arborist may not be able to predict when a tree may fail, but the arborist will be able to identify most problems, and the risk of failure will be reduced by having your trees inspected and carrying out of the arborist's recommendations.

## Verbal Advice

Caution should be taken in interpreting advice given verbally as understanding and recollection may be unreliable.

## Further studies that may be required

No **heritage**, **ecological** or **habitat assessments** were carried out for this site by Canopy Tree Expert's arborists or their agents. No assessment of the **benefits** of these trees was made.

## Tree Risk Assessment

Although the arborist is qualified and authorised to assess risk by both the QTRA and TRAQ methods of assessment, neither method was carried out for this report. However, the training for these authorisations will have influenced the way in which the assessor views the risk associated with trees. A QTRA assessment can be carried out if requested. ([www.qtra.co.uk](http://www.qtra.co.uk), [www.isa-arbor.com](http://www.isa-arbor.com) )

<sup>3</sup>VTA Method (Visual Tree Assessment) as presented in *The body language of trees*1994 Mattheck, Claus & Breloer, Helge, The Stationery office, Norwich, UK pp.118-120.
